***RESTRICTION***

Prior to setting forth the restriction requirement, it is pointed out that Applicants have presented the method claims in improper Markush format. See Ex parte Markush, 1925 C.D. 126 and In re Weber, 198 USPQ 334. The method claims are improperly joined as the claimed methods require the amplification and detection of distinct target molecules. A reference against one target molecule would not be a reference against the other target molecule. Therefore, the restriction will be set forth for each of the various groups, irrespective of the improper format of the claims, because the claims do not recite proper species. Upon election, Applicants are required to amend the claims to set forth only the elected inventive groups.

Restriction to one of the following inventions is required under 35 U.S.C. § 121 and 372:

I. Claims 1, 2, 5-14, drawn to amplification methods and oligonucleotides and primers for detecting BKRF1 and BARF1.

I. Claims 1, 2, 5-14, drawn to amplification methods and oligonucleotides and primers for detecting BKRF1 and BARF1.

II. Claims 1 and 4-14, drawn to amplification methods and oligonucleotides and primers for detecting BKRF1 and BNLF1.

III. Claims 1, 3, 5-14, drawn to amplification methods and oligonucleotides and primers for detecting BKRF1 and BCRF1.

IV. Claims 1, 3, 5-14, drawn to amplification methods and oligonucleotides and primers for detecting BKRF1 and BDLF2.

Art Unit: 1655

V. Claims 1 and 5-14, drawn to amplification methods and oligonucleotides and primers for detecting Imp-2 and BARF1.

VI. Claims 1 and 4-14, drawn to amplification methods and oligonucleotides and primers for detecting BKRF1 and BNLF1.

VII. Claims 1, 3, 5-14, drawn to amplification methods and oligonucleotides and primers for detecting Imp-2 and BCRF1.

VIII. Claims 1, 2, 5-14, drawn to amplification methods and oligonucleotides and primers for detecting Imp-2 and BDLF2.

The inventions listed as Groups I-VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature for the following reasons:

Inventions I-VIII drawn to methods for amplifying distinct regions of the Epstein-Barr virus genome and to primers and oligonucleotides which consist of distinct sequences of the Epstein-Barr virus genome. The products of Groups I-VIII differ from one another with respect to their structural and functional properties.

***Sequence Election Requirement Applicable to All Groups***

In addition, each invention detailed above reads on patentably distinct inventions drawn to multiple SEQ ID Numbers. The sequences are patentably distinct because they are structurally and functionally unrelated sequences, and a further restriction is applied to each invention. **In response to the restriction requirement, Applicant must further elect a single oligonucleotide and a single oligonucleotide pair, corresponding to the invention recited**

Art Unit: 1655

**above.** For example, Applicant may elect, "the BCRF1 reading frame spanning nucleotides 8675-10184" and the primer pair of SEQ ID NO: 27 and 30.

It is noted that nucleotide sequences encoding different proteins and/or having distinct nucleotide sequences are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to constitute independent and distinct inventions within the meaning of 35 U.S.C. 121 and 372. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.14.

Because these inventions are distinct for the reasons given above and have acquired a different status in the art as demonstrated by their divergent subject matter and because inventions I-VIII require different keyword and sequence searches that are not co-extensive, examination of these distinct inventions would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
